CHN Classification : GB8624-2012: Class B

EU Classification : EN 15102 : 2007+A1 : 2011

Free Match   Straight Match   Extra Washable   Paste the Wall   Colour Fastness

Anti Microbial Features:

Water based environmentally friendly inks, free of Cadmium. Mercury and Ozone depleting chemicals.

Wall Surface Preparations:

The wall surface must be clean, smooth, stable, even and all in one colour before hanging wallpaper. The wall should be dry enough with a maximum of 8% water absorption. If the other side of the wall is in a bathroom, the surface of the wall must be water proof. If the wall is wet of mouldy, the mould needs to be eliminated completely by brushing fungicide on it which will also make it moisture proof.
Adhesive Applying:

Apply adhesive evenly to the back of the wallpaper, fold and leave it for 5-10 minutes, and let the cloth absorb the adhesive completely. For heavy wallpaper, you can also brush adhesive directly to the wall and wait 5-10 minutes before hanging.

Hanging :

Start to hang from a corner and use a plumb line to ensure the wallpaper is straight and not leaning to one side, if the corner you started from is not straight, use a wiper board to smooth the wallpaper evenly and gently to remove any bubbles. For heavier wallpaper, use a strong glue for the seams. When applying the second strip, it should be applied to edge of the previous one and make sure the design is matched. For plain wallpapers there is no need to match. Overlap the two strips and use a sharp knife to cut in the middle. To make the cutting line straight, use a steel ruler.

CHN Classification : GB8624-2012: Class B

EU Classification : EN 15102 : 2007+A1 : 2011

Free Match   Straight Match   Extra Washable   Paste the Wall   Colour Fastness

Anti Microbial Features:

Water based environmentally friendly inks, free of Cadmium. Mercury and Ozone depleting chemicals.

Wall Surface Preparations:

The wall surface must be clean, smooth, stable, even and all in one colour before hanging wallpaper. The wall should be dry enough with a maximum of 8% water absorption. If the other side of the wall is in a bathroom, the surface of the wall must be water proof. If the wall is wet of mouldy, the mould needs to be eliminated completely by brushing fungicide on it which will also make it moisture proof.

Adhesive Applying:

Apply adhesive evenly to the back of the wallpaper, fold and leave it for 5-10 minutes, and let the cloth absorb the adhesive completely. For heavy wallpaper, you can also brush adhesive directly to the wall and wait 5-10 minutes before hanging.

Hanging :

Start to hang from a corner and use a plumb line to ensure the wallpaper is straight and not leaning to one side, if the corner you started from is not straight, use a wiper board to smooth the wallpaper evenly and gently to remove any bubbles. For heavier wallpaper, use a strong glue for the seams. When applying the second strip, it should be applied to edge of the previous one and make sure the design is matched. For plain wallpapers there is no need to match. Overlap the two strips and use a sharp knife to cut in the middle. To make the cutting line straight, use a steel ruler.

Free Match   Straight Match   Extra Washable   Paste the Wall   Colour Fastness

Anti Microbial Features:

Water based environmentally friendly inks, free of Cadmium. Mercury and Ozone depleting chemicals.

Wall Surface Preparations:

The wall surface must be clean, smooth, stable, even and all in one colour before hanging wallpaper. The wall should be dry enough with a maximum of 8% water absorption. If the other side of the wall is in a bathroom, the surface of the wall must be water proof. If the wall is wet of mouldy, the mould needs to be eliminated completely by brushing fungicide on it which will also make it moisture proof.

Adhesive Applying:

Apply adhesive evenly to the back of the wallpaper, fold and leave it for 5-10 minutes, and let the cloth absorb the adhesive completely. For heavy wallpaper, you can also brush adhesive directly to the wall and wait 5-10 minutes before hanging.

Hanging :

Start to hang from a corner and use a plumb line to ensure the wallpaper is straight and not leaning to one side, if the corner you started from is not straight, use a wiper board to smooth the wallpaper evenly and gently to remove any bubbles. For heavier wallpaper, use a strong glue for the seams. When applying the second strip, it should be applied to edge of the previous one and make sure the design is matched. For plain wallpapers there is no need to match. Overlap the two strips and use a sharp knife to cut in the middle. To make the cutting line straight, use a steel ruler.
